Creative intelligence, Self-awareness, Collaborative platform, Sharing archives, Future education

DESCRIPTION

We invite you to our journey to the future of creativity.

Please, join us to discover planet C!!!

What is Planet C? Planet C is an undiscovered planet with some unique spaces. These spaces not only offer new perspectives but will help us to be creative in the future.

How does this work for education in the design-& fashion industry?

Here comes creativity and planet C into play. We are deeply convinced that creative processes not only help dealing with the challenges of how we work in the future but also help human beings to find fulfilment.

How can we get together, how can we share experiences and exchange ideas?

For a start we would like to bridge the distance between digitized work and real-world experience by offering a metaverse platform (Planet C-creativity) with virtual houses.

Since potential creators spent much time in front of screens anyway, we address them with a playful, game-based interface that intends to awaken the joy of learning and research. A house community with spaces for intercultural and interdisciplinary exchange, knowledge promotion and creativity.

The entire platform is based on a social mindset and empathy. It offers safe spaces designed for meetings, work, relaxation etc.

How can craftsmanship and textile heritage be part of future creativity?

Planet C can be a gateway to institutions and fashion archives. It can also showcase rare crafts, hidden treasures and host local experts from all fields of creation.

How can future education offer enough space for self- development? Is there still room for an individual identity?

Personal development is more important than ever, facing the challenges of manipulative social media algorithms and information abundance. Planet C also stands for Creative Intelligence. We aim to empower future designers, providing the confidence it takes to survive in a challenging environment. How do virtual spaces affect us, aren't humans analogue creatures after all?

In a second step planet C encourages real world contact and hands-on experiences as important elements in any creative process. In addition human wellbeing is stimulated „on the go“.

An example how this can work are apps that help like-minded people to get together, be it for work-out in the park, for exchanging skills and so on.

That provides the ground - literally - for training the designers of tomorrow, not only providing the necessary skills but also taking into account human needs and potential.

We see Planet C as a form of survival in post-humanism.

Assets such as self-awareness, body-experience, self-transformation, thinking out of the box, resilience and so on, all leading to Creative Intelligence. With the advent of A.I. it is this C.I. that we want to nurture.

We invite all IFFTI members to join this idea! Become an inhabitant of Planet C! Feel free, to contribute to the power of creativity.
